

Project: *Pipe Jacking through Active Railroad Embankment*
Location: *Darien, Connecticut*
Owner: *Connecticut Department of Transportation*

A.DiCesare Associates provided resident construction engineering services for a “new” 42-inch Class V concrete pipe culvert. This project entailed pipe jacking 80 linear feet of pipe through an active railroad embankment supporting four mainline tracks along the Northeast Corridor. The adjacent pre-existing culvert was filled with grout and abandoned. Once complete, the channel was re-directed through the new culvert.

Services included twenty-four (24) hour continuous site inspections, daily reporting, surveying, measuring, and computation of quantities. This was accomplished while ensuring conformance with the plans, specifications, and all environmental permits.
