

Project: *East Avenue Roadway Widening*

Location: *Norwalk, Connecticut*

Owner: *ConnDOT/ City of Norwalk DPW*

A.DiCesare Associates is providing conceptual design, preliminary and final design services for the reconstruction and widening of East Avenue in Norwalk, CT. The roadway widening is to be performed in conjunction with the replacement of the railroad bridge over East Ave. The railroad bridge limits the roadway width and the vertical clearance.

The project involves increasing the East Ave. roadway width from two to four travel lanes (two in each direction) from Olmstead Pl. to Rowan St. (approx. 2200 feet). Additionally, the roadway will be lowered to improve the vertical clearance beneath the bridge to 14'-6". Improvements to the existing storm drainage will be made to alleviate localized roadway flooding.

The maintenance and protection of vehicular and pedestrian traffic during all phases of construction and is a key component of the project .
