

Project: *“On-Call” Engineering Services*

Location: *New York City Metropolitan*

Owner: *Metro-North Railroad*

A.DiCesare Associates is participating in an eight year program (2001 to 2008) for the provision of “on-call” engineering services for the inspection, design, and construction support services associated with the undergrade railroad bridges along the Harlem, Hudson, and New Haven Lines of Metro-North Railroad. Structures include through trusses, through girders, deck girders, and composite construction type bridges. The project includes providing engineering support for the Railroad’s in-house Track & Structures Department, as well as preparing Contract Documents for solicitation of bids.

Initial phase of the project is to prioritize structures in need of rehabilitation or reconstruction and to establish a Capital Budget Program for the eight year cycle.
