

---

**Project:** *Norwalk River Railroad Bridge*

**Location:** *Norwalk, Connecticut*

**Owner:** *Connecticut Department of Transportation*

---

**Under a State Emergency Declaration, A.DiCesare Associates responded immediately to perform an underwater inspection and evaluation, and prepared a detailed report with recommendations for the reconstruction of the fender system protecting the Norwalk River Railroad Bridge. As a result of impact from tandem stone barges, the Department together with the United States Coast Guard, the US Army Corps of Engineers, and the Connecticut Department of Environmental Protection were concerned with the integrity of the support pier, as well as the navigability of the main channel to Long Island Sound. Both above water and underwater inspection was conducted. All work performed in accordance with the Connecticut Department of Transportation guidelines and regulations.**
