

Project: *Rehabilitation of Riverscape Marina*
Location: *Greenwich, Connecticut*
Owner: *Private*

A.DiCesare Associates working together with Infracore, LLC provided inspection, evaluation, design and build services for the rehabilitation to a heavily deteriorated timber bulkhead, sinkholes, and replacement of substandard boardwalk.

Timber bulkhead was rebuilt with 3x9 pressure treated tongue and groove timber planks which were embedded into the riverbed and lag bolted to timber walers. The boardwalk was removed and replaced with a wood-polymer lumber surface and rail system. Material requires minimum maintenance due to the fact that yearly sealants are not required to maintain integrity.
